(54) CUTTING CONNECTING SYSTEM FOR DIGITAL EXCHANGING LINE

(57)Abstract:

PURPOSE: To avoid leaving of the wasteful line connection to chance and the repeating of the wasteful line cutting/connection by holding the cutting of the line for a constant time after 1 data transmission/reception is completed.

CONSTITUTION: In a data communicating network equipped with a line exchanging system digital exchanging network 4 and plural nodes 1~3 connected to the digital exchanging network, respective nodes, when data communication is executed by using the line exchanging system digital exchanging line, are constituted so as to hold the cutting of the line for a constant time after 1 data transmission or reception is completed. Thus, since the wasteful connecting leaving and the line connecting/cutting repeating can be avoided, the line exchanging system digital exchanging line can be effectively used.
